Zohaib Mustafa — Resume (Automation & ERP Developer)

ZOHAIB MUSTAFA

ERP & Automation Developer — Laravel · AI Workflow Automation

Chakwal, Pakistan · Available on-site in Rawalpindi & Islamabad

zohaibmustafa200@gmail.com · +92 337 1638494

Portfolio: portfolio-lilac-ten-70.vercel.app · GitHub: github.com/zohaib298

SUMMARY

Developer with 1 year of hands-on experience building and running a production Laravel ERP that a working business uses every day for sales, quotations and operations. Built the system's automated quotation module and connected it to n8n workflows and AI agents that handle repetitive work end to end. Unusual combination of writing the software and running the operations it serves — so requirements come from real use, not guesswork. Looking for a developer or automation role in Rawalpindi or Islamabad.

SKILLS

Automation & AI: n8n workflow automation, AI agents, Claude Code (AI-assisted development), prompt engineering, email and document automation

Development: Laravel, PHP, JavaScript, HTML, CSS, MySQL, REST APIs, authentication, routing, database design

Business systems: ERP modules, quotation and inventory workflows, warehouse stock management, requirements gathering from non-technical staff

Tools: Git, GitHub

EXPERIENCE

ERP Software Developer & Operations Executive — Fire Safety Trading (Pvt.) Ltd., Rawalpindi · 2025 – Present

- Built and maintain the company's Laravel ERP in production — the system the sales and operations teams use daily for quotations, orders and records.

- Developed an automated quotation module that generates client quotations from product data, cutting manual typing and pricing errors.
- Designed n8n workflows and AI agents that move data between systems and handle repetitive email and record-keeping tasks without staff involvement.
- Implemented backend features in Laravel: authentication, routing, database schema and queries.
- Gathered requirements directly from management and staff, then shipped them as working ERP features.
- Ran day-to-day operations alongside development — preparing quotations for fire safety products, handling client and supplier correspondence, and supporting the sales team.
- Used Claude Code for AI-assisted development, debugging and faster feature delivery.

PROJECTS

ERP Software (production) — Laravel. Full ERP managing core business processes in one system; in daily use at Fire Safety Trading.

Auto Email Reply AI Agent — n8n. Reads incoming email, drafts a reply in context and sends it, removing manual handling of routine correspondence.

Inventory Management AI Agent — n8n + Laravel. Tracks stock levels and triggers automated workflows as inventory moves.

Warehouse Management System — Laravel. Manages warehouse stock and inventory movement with full record history.

Further projects (business management system, school management system, Jarvis-style personal AI assistant) on GitHub: github.com/zohaib298

EDUCATION & CERTIFICATION

Full Stack Web Development — PNY Trainings, 6-month certified course

FSc (ICS) — Kallar Kahar Science College, Chakwal, 2023
